

WHATS IN YOUR FILTER

Stage 1: Primary Filter Felt Pads – Effectively removes rust and sediment particles and stops proliferation of bacteria.

Stage 2: KDF - assists the activated carbon filter to rid your water of chlorine, lead, mercury, iron and hydrogen sulphide (7 Stage Filters do not contain KDF)

Stage 3: Activated Carbon – Removes chlorine, organic sediment and odours from your mains water.

Stage 4: Mineralised Balls – Adds natural trace element minerals required by the body including iron, zinc, magnesium, potassium and iodine.

Stage 5: Mineral Ceramic Balls – Insoluble, gradually releases mineral substances.

Stage 6: Activated Carbon

Stage 7: Mineralised Balls

Stage 8: Ceramic Plate – Removes bacteria and parasites e.g Giardia
